Visual Basic for Office Applications

(VBA) CIS 2023 – “Live” Class (#4181) or
Online Class (#4188)

Want to learn a little programming that you'll find immediately useful? Then you owe it to yourself to see how Visual Basic (VBA) can automate many of your daily or weekly computer tasks.

VBA is built into Microsoft Office; no extra software is required. **This course will focus on projects in Excel and Word.** However, you'll learn techniques you can apply to any application (PowerPoint, Outlook, Access, etc.)

You'll have the power to tackle those “wouldn't it be nice if ...” jobs that seem overwhelming (and often *are*) if done manually.

This class is project-oriented, allowing you to use these tools to make *your* life easier.

Prerequisites: good computer skills and previous use of Microsoft Office (no prior programming required).

Contact instructor for further information.

“Live” Class (#4181) meets Monday evenings, 6:00 – 8:00 p.m. Jan. 19 – May 4 or take online class (#4188) from anywhere!

For textbook and other details,

go to www.amesko.com.

Click [NPCC Class Resources](#) link, then click [[Visual Basic for Applications](#)] link.
